

KEIZAI DOYUKAI

Criteria for Corporate Assessment (Worksheet)

Practical tool for status evaluation and goal-setting for the comprehensive corporate value enhancement

1st Edition

March 2003

<Japan Association of Corporate Executives>

Introduction—Points to note when conducting the evaluation

(1) This is an entirely voluntary exercise

The submission of these evaluation sheets to the Keizai Doyukai is not obligatory. However, by securing active participation in this exercise and the conduct of evaluations voluntarily, we aim to develop it into a tool that will help to stimulate the activities of companies, to build their trustworthiness, and to enhance their competitiveness.

(2) Please conduct your evaluation of current status subjectively

Please do your utmost to conduct your evaluation subjectively. Rather than giving formal, model replies, we would prefer you to state clearly any points you particularly wish to draw attention to.

(3) It is not vital for the evaluation to reply to every item

These evaluation sheets encompass a very wide range of fields, and it is not vital for the evaluation to reply to every item. There are items that do not apply to companies in certain industries and of a certain scale, and the way of tackling them varies according to different corporate philosophies.

(4) We request that the content of replies be finally confirmed by corporate executives themselves

These evaluation sheets contain portions for the insertion of detailed figures that only the persons immediately responsible can grasp. However, please ensure that the corporate executives review the content of the finalized responses, and confirm that they themselves are prepared to commit themselves to them.

(5) No data provided in responses will be made public without permission

Give the essential aim of these evaluation sheets, ideally the content of the responses (evaluations of current status and targets) should be disclosed voluntarily as companies' commitments to society. However, given that the evaluation methodology has not been established sufficiently, at this stage the principal objective is the collation and analysis of data, and no details of individual responses will be revealed publicly without permission. What we are considering releasing will be limited to the results of aggregation and analysis, and examples (subject to receiving permission) of what we consider to be best practice.

(6) Painstaking management of individual data

The study of individual data within the Secretariat will be limited to the staff responsible, and its storage will be conducted strictly. When aggregation is assigned to outside entities, measures will be taken to ensure that respondents cannot be identified, and care will be taken to prevent outflows of data.

(7) Please understand that active disclosure is now the trend

Nevertheless, please understand that at the very least active disclosure is now the trend. With respect to many of the questions requiring the insertion of specific numerical values, it is desirable for disclosure to be made, as this is to the benefit of companies under the GRI Guidelines (sustainability reporting guidelines), Environmental Reporting Guidelines (Ministry of the Environment), etc.

Please read the explanations on the following pages, keeping the above points in mind as you do so.

Characteristics of These Evaluation Criteria

In its "21st Century Declaration" (issued in December 2000), the Keizai Doyukai advocated the concept of "market evolution," calling for the building of a market capable of valuing comprehensive corporate value that encompasses not only "economic aspects" but also "social aspects" and "human aspects," and for companies to take active initiatives towards that goal.

These "corporate evaluation criteria" represent an attempt to advocate new criteria for translating the concept of market evolution into reality from the standpoint of corporate executives. They have the following characteristics.

(1) A checklist for self-assessment by corporate executives

They constitute a checklist for corporate executives themselves to evaluate the state of their own companies' efforts, while taking note of the diversity of social values (standpoints for evaluating companies) and the changes that occur in them.

(2) A tool for showing targets as commitments

This is a tool to be used not only for evaluation of current status, but also to stimulate efforts to achieve concrete results through the voluntary establishment of targets and the commitment to their achievement.

(3) A tool for identifying and evaluating best practices

As in the case of many third-party evaluations, it is not a tool for evaluation in a onesided and uniform manner based on specific value judgments. It is not something to impose fixed frameworks onto corporate activity in individual fields, but a tool for the identification and better evaluation of best practice amid the diverse efforts being made by individual companies. Accordingly, there is no weighting of the items in each question and no ranking in terms of point totals.

(4) Items in questions devised from the standpoint of contributing to risk management and business case

The items within questions have been devised from two perspectives. First, risk management. They identify in advance the problems that may give rise to future risk, endeavor to improve them rapidly, and examine whether any substantial gaps are emerging between social values and the company's values.

Second, business case. They identify changes in social values and needs, and by quickly linking these to value creation and the creation of new markets, they lead to the strengthening of the company's competitiveness and its sustained development.

(5) Question items inquire whether there are *functions* rather than whether there is *form*.

It is appropriate that the *form* of an effective mechanism for achieving an objective varies according to each company's philosophy and characteristics. In view of this, the method used is as follows: the questions concerning Process do not ask whether there is a specific *form* (e.g. whether there are outside directors), but whether it has particular *functions* (e.g. the introduction of outside viewpoints), and if this is effective it asks respondents to be specific about the form it takes.

(6) A tool for ongoing "evolution"

As for the future, we intend to continue with the collation and analysis of concrete response data, the extraction and evaluation of best practice, and the analysis of hypothetical averages by industry and by corporate scale, and to revise evaluation categories and refine our methodology, reflecting opinions from various quarters and changes in social needs.

How to Fill in the Evaluation Sheets

(1) Evaluation targets

The purpose of these evaluation sheets is to have corporate executives evaluate the current state of their own companies and commit themselves to targets. However, since they contain numerous portions for the insertion of detailed figures that only the persons immediately responsible can grasp, the task of completing these may be assigned to those persons responsible, though we request that corporate executives themselves review the content of the finalized responses and confirm that they are prepared to commit themselves to them. With respect to the section "II. Corporate Governance (CG)," we recommend that as far as possible this is completed by corporate executives themselves.

(2) Structure of evaluation criteria

The evaluation criteria comprise 110 items divided into five broad fields (markets, environment, personnel, society, corporate governance). The classifications are as follows.

I. (Corporate Social Responsibilit	ty (CSR)		(83)
	1. Markets	1-a. Process	(Status evaluation)	15
		1-b. Performance	(Status evaluation and goal-setting)	9
	2. Environment	2-a. Process	(Status evaluation)	11
		2-b. Performance	(Status evaluation and goal-setting)	10
	3. People	3-a. Process	(Status evaluation)	11
		3-b. Performance	(Status evaluation and goal-setting)	11
	4. Society	4-a. Process	(Status evaluation)	10
		4-b. Performance	(Status evaluation and goal-setting)	6
II.	I. Corporate Governance (CG)			(27)
	1. Principles and leadership		(Status evaluation)	6
	2. Management systems		(Status evaluation)	9
	3. Compliance		(Status evaluation)	8
	4. Disclosure and communic	ation	(Status evaluation)	4

(3) Evaluation of current status

In both "I. Corporate Social Responsibility (CSR)" and "II. Corporate Governance (CG)" there is an assessment of the current status. Generally an assessment consisting of three levels (excluding "Not applicable" or similar statements) is provided as shown below, so please select the one that describes your situation most suitably.

When "2" is selected, please also add some brief specific details (unless these relate to company secrets). The purpose of this is to enable us to evaluate the better approaches that are being adopted. It is envisaged that in the course of collating and analyzing the response data, unique steps that are regarded as being particularly outstanding (e.g. through the establishment of an evaluation committee) will be picked out and be given a higher grading.

Example: Process

N: Not applicable		Ν
0: No		0
1: Yes		1
2: Yes, and we believe that satisfactory results are being achieved		2
(If 2, please briefly describe the specific steps taken)		
[]	

(4) Status evaluation and goal-setting

With respect to "Performance" in "I. Corporate Social Responsibility (CSR)," there is an evaluation of current status, and goal-setting. The most recent fiscal year-end at which specific numerical values have been released or identified is the "most recent term." As a rule the trend over approximately the next three years is evaluated according to the three levels shown below, and you are requested to select the one that describes your situation most suitably, and to specify the most recent figure.

In addition, as regards goal-setting, in principle please insert the target value for approximately the next three years from the "most recent term." This shows the commitment of the management, and thus please insert the values you judge are targets that are attainable (management effort) in three years' time.

For both current status and goal-setting, you may leave these blank if it is difficult to insert specific values.

Example: Performance

(Trend over the past 3 years)	N: Not applicable -1: Downward trend 0: Flat 1: Upward trend	N -1
(Specific figures: Current state	us and target)	0 1
End of previous fiscal year:	$_\%$ → Target in 3 years' time:%	

(5) Method of filling in sections for voluntary comments

At the end of each field there is a section for free comments. For each field, irrespective of whether you have filled in specific evaluation items, please fill this in if you wish your individual "Process", "Performance," etc., to be evaluated. Here too it is envisaged that in the course of collating and analyzing the response data, unique steps that are regarded as being particularly outstanding (e.g. through the establishment of an evaluation committee) will be picked out and be given a higher grading.

In addition, although these will not be evaluated, there are also sections in which you may write in comments such on individual "targets" and "aimed-for ideals" that you consider are worth mentioning.

Profile

Please first fill in the essential items set out below.
